1 Past Progress

Since my senior thesis was due this past Friday, I did not make substantial progress on my project this week. However, I did figure out how to fork a repo on Github. The code I'll be working with can be found here:

<https://github.com/alexaaag/Bokeh-Python-Visualization>.

I also did some quick exploratory analysis and found that the data set needs a lot of cleaning, because there are around 20% information missing on many columns. Also each feature name is not named cleanly. Therefore I imagine I need to do a lot of re-naming to get the data in workable form.

2 Look Ahead

I will focus on cleaning the data set so it's in workable format. And I will run some summary plots that I want to show in the dashboard.
